"Elimination Diets in the Diagnosis of Food Allergies."

Belgrade, Srpski Arhiv za Celokupno Lekarstvo, Vol 91, No 3, Mar 63;  
pp 269-272.

Abstract [German summary modified]: Data on 2200 allergic patients incl.  
700 food allergies: 223 rash, 244 eczema, 130 gastroenteritis, 41 bronchial  
asthma, 33 Quincke's edema, 5 migraine, 4 rhinitis. Food allergies could  
be traced in 44% by preliminary routine systematized history-taking; in  
66% of rest by elimination diet while 34% of the patients were eventually  
shown to be allergic to contactants or drugs concurrently rather than to  
ingestants alone. Mixed multiple sensitivities are a most vexatious  
problem. Two case reports; 6 Western and 3 Yugoslav references.

Title : The Improvement of the Krivovir Sheep by Crossing Them with Merino Rams.

Orig Pub: Veterinaria (Jugosl.), 1957, 6, No 2-3, 400-409.

Abstract: The crossing of the Krivovir sheep with the Merino rams of the meat type was conducted on the farm of the Dobricevo Institute of Sheepbreeding (Serbia). The average live weight of the hybrid ewes at the age of 2-7 years 40.7 kg., the average wool yield for 1949-1953 - 2.42 kg.; the Krivovir sheep had 37.6 and 1.62 kg., respectively. The crossing of the other local breeds with the Merino of the Rambouillet type, and especially with the Corriedales, produces a more substantial increase of the wool yield.

"Pellagra."

Zagreb, Lijecnicki Vjesnik, Vol 85, No 8, 1963, pp 829-842.

Abstract: [Author's English summary modified] The author discusses the etiology and clinical aspects of pellagra in the light of the first five cases to be observed in northern Croatia. The disease had previously been believed to be confined in Yugoslavia to the endemic regions of Bosanska Krajina and the Kosmet, but the author suggests that there may be many more undiagnosed cases (forms without skin lesions are difficult to diagnose). Four of the patients (all of whom came from separate villages in the vicinity of Daruvar) were heavy drinkers (two were confirmed alcoholics), while the fifth belonged to a religious sect which forbids the eating of meat and allows only small amounts of eggs and milk to be eaten. The author concludes that the possibility of pellagra should be taken into consideration "in season" (spring and summer) in nervous or digestive disturbances in alcoholics, in partial malnutrition, in all chronic diseases when hypoalbuminemia and low cholesterol values are evident along with other symptoms, and in cases of vitamin B deficiency and of A and C deficiency to an extent. Three tables, three 1/1 illustrations, 12 Western and 11 Yugoslav references.

TITLE: Creep-resistant nickel-base alloy

37

B

SOURCE: Vynalezky, no. 8, 1965, p. 18 of supplement

TOPIC TAGS: alloy, heat resistant alloy, nickel alloy, chromium containing alloy, molybdenum containing alloy, tungsten containing alloy, cobalt containing alloy, titanium containing alloy, aluminum containing alloy, boron containing alloy, zirconium containing alloy

ABSTRACT: This Czech patent introduces an age-hardenable nickel-base alloy which has a very high creep strength at temperatures up to 1000C. The alloy contains 0.05-0.30% carbon, 0.50% max manganese, 0.50% max silicon, 8.0-13.0% chromium, 3.0-5.0% molybdenum, 2.0-5.0% tungsten, 2.5-12.0% cobalt, 0.5-6% titanium, 0.5-2% aluminum, 0.01-0.1% boron, 11-15% zirconium and 1% max iron.
